**Connect up to 4 Independent Cameras**

With 4 independent HDMI inputs, you can connect up to 4 high quality video cameras. Video cameras with HDMI outputs are dramatically better quality than single webcams as they use higher quality lenses and have better low light sensitivity. All video sources will re-sync to the switcher if they operate at different video standards so you don't have to worry about connecting video devices as they all just work! Cameras with HDMI often support interchangeable lenses so you can change to wide angle lenses for wide shots and zoom lenses for close-ups. Imagine taking advantage of the low light availability of better cameras for theater production, weddings, school concerts and music videos!

**Outputs to HDMI Video and USB Webcam!**

To ensure maximum compatibility, ATEM Mini features a USB connection that operates as a simple webcam source. That means you can plug in and instantly get working with any video software. The software is tricked into thinking the ATEM Mini is a common webcam, but it's really a live production switcher! That guarantees full compatibility with any video software and in full resolution 1080i HD quality. Choose any software you like, such as Open Broadcaster for live streaming, or Skype for Powerpoint presentations. ATEM Mini works with software and platforms such as Open Broadcaster, XSplit Broadcaster, YouTube Live, Facebook Live, Skype, Zoom, Twitch, Periscope, Livestream, Wevcast and more!

A photograph of the ATEM Mini switcher unit, a small black rectangular device with various ports and buttons on top. The ports shown include a power jack, an ATEM control port, a USB port, and an HDMI port. The top panel has several buttons and a small display.
